The Michigan athletic department announced Friday afternoon that it recorded eight positive COVID-19 test results between Nov. 14-20.

Of the eight positives, seven were from student-athletes, while the other was from a staff member.

Since the Wolverines began testing and releasing weekly updates, they have conducted 21,576 total tests, with 177 positive results.

There have been 17,099 tests administered to student-athletes, with 158 positive tests. 5,810 tests have been administered to staff members, with 19 positive tests.

[MSU's COVID-19 numbers drop; 4 athletes, 1 staff member test positive]

It is the third consecutive week that Michigan has reported single-digit positive tests (nine last week, nine the week before that). The Wolverines reported a new single-week high of 26 positive tests roughly one month ago, on Oct. 23, but seem to have limited an outbreak within the athletic department based on the past month's updates.

In addition to the football team, which enters its fifth week in competition, the ice hockey team began play last week while the men's and women's basketball teams gear up for competition in the coming week.
